Coupons and Prescription Savings Cards

QuicDoc® EMR E-Prescribing with Patient Advisor Offers Savings on Prescriptions for Your Patients!

As a behavioral health care provider, you know that medication management is an important part of treatment. Reducing the cost of prescriptions can help your patients afford them, as well as continue their medications, which can have a significant impact on generating better health outcomes.

What it Offers...

We at DocuTrac are helping with this by providing a patient savings interface within our Electronic Prescribing functionality. Up to twenty-nine percent of patients don't fill their prescriptions because of the cost to do so. QuicDoc e-prescribing users are able to print coupons and/or prescription savings cards for patients, all with just a single click in the Patient Advisor feature.

Helping your patients save money on their prescriptions is EASY!

When entering and saving medication details in the Prescribing screen, a window with a coupon or savings card (whichever benefits the patient most) will automatically pop up. It can easily be printed or it can be ignored by simply continuing with your workflow.

Assisting Providers with Medication Adherence and Cost Savings for Patients
