

Improve Patient Outcomes, Increase Practice Efficiency and Maximize Cost Savings

Electronic prescribing is more than generating a prescription on a computer and printing or faxing it to a pharmacy. E-prescribing must also provide functionality and workflow flexibility to work for both physicians and staff involved in the prescribing process.

Over 63% of physicians nationwide are using e-prescribing as of 2012, helping provide a higher level of patient safety and service, streamline back office business systems and save time and money through the efficiency of electronic medication orders, renewals and formulary checking.

Patient Safety

Make more informed real-time decisions by having the patient's medication history and allergies at the point-of-care.

Time Savings

On average writing an electronic prescription takes about one minute and twenty seconds compared to three minutes and thirty seconds for a call-in.

Money Saving

Avoid the Medicare MIPPA and Meaningful Use for 2014 and subsequent years after.

Easy-to-Use Technology

Technology should make life easier, not more complicated. E-prescribing integrates seamlessly with practice systems already in place.

Security of Award-Winning Software

Our e-prescribing system has received Surescripts White Coat of Quality award in recognition of its consistent commitment to excellence in electronic prescribing.

Positive Image

Patients will have greater confidence that their provider is current in all areas of health care by having the latest technology.
