Question: We have a remote location which will be connected to the main office using a VPN tunnel. What are your recommendations for using your product in this environment?

Answer: Yes, it is possible to run the software over VPN tunnels. We do not provide support for WAN or VPNs directly, as it is beyond our control. However, we have many customers who use various VPN solutions with success. As long as the network routing is configured correctly, and the server has TCP ports 1433 and 1434 open (for SQL server and SQL browser, respectively).

Another option is our Cloud services that we offer called QuicDoc® Office in the Cloud. You can access your clinical records and data from anywhere, anytime as long as you have an internet connection. Cloud-based systems offer built in data protection, bank-level security, high-level encryption, and are HIPAA compliant. For more information on QuicDoc® Office in the Cloud, click [here](#).
